CompassDeck: Focused Team Navigation Software ( )

Product Vision & Value Proposition

The future of collaboration is purposeful and visually intuitive. CompassDeck transforms abstract project goals into tangible, shared voyages. It's not just a meeting tool; it’s a dynamic operating system for alignment.

CompassDeck drastically cuts down on meeting overhead by ensuring every interaction contributes to the "forward momentum," making collaboration feel less like a chore and more like an organized adventure.

• Unique Selling Points (USPs):

• Emotional Engagement: The sailing metaphor makes goal pursuit feel like an adventure, reducing burnout and increasing buy-in.

• Role Clarity: Mandatory, rotating "crew roles" (Helmsman, Navigator) ensure active participation and definitive accountability.

• Visual Progress Mapping: Teams see their "ship" move toward the "destination" in real-time, offering instant, aspirational clarity superior to static dashboards.

• Advanced Risk Detection: "Squall Alerts" proactively flag dependencies or roadblocks before they escalate, maintaining smooth sailing.

Consumer & Market Impact

• Persona 1: The Remote Project Manager (Practical)

Struggles with distributed teams losing focus in virtual meetings, leading to project drift and unclear follow-up tasks.

Quote: “This would save me hours every week managing task handoffs and clarifying who owns the next move. It keeps the team honest.”

• Persona 2: The Hybrid Executive (Strategic)

Requires a bird's-eye view of organizational alignment across multiple, simultaneous projects and struggles to assess high-level velocity and strategic risk.

Quote: “Finally, a tool that visualizes strategic cohesion. It feels like something from the future.”

• Persona 3: The Early-Career Contributor (Emotional/Non-Obvious)

Often feels intimidated or unsure how to contribute effectively in large virtual meetings, lacking a clear, assigned voice or responsibility.

Quote: “The assigned roles make me feel valuable and focused. I know exactly how my small action helps sail the ship.”

• Early Use Cases: High-growth **SaaS/Tech Startups** (where rapid, aligned iteration is key) and **Consulting Agencies** (where managing multiple client “voyages” requires tight, measurable coordination).

Feasibility Assessment

• **NASA TRL (Technological Readiness Level): TRL 6 – System/ subsystem model or prototype demonstrated in a relevant environment.** (NASA TRL measures the maturity of the underlying technology from basic research to functional systems.)

Assessment: The platform relies on existing, established web development frameworks (e.g., visual mapping libraries, integrated task management APIs). A feature-complete prototype simulating a full meeting "voyage" is highly feasible.

Next Stage: **TRL 7** – System prototype demonstration in an operational environment (i.e., piloting the full product with real enterprise clients to prove robustness under load).

• **KTH BRL (Business Readiness Level): BRL 4 – Prototype tested with customer needs identified.** (KTH BRL measures the maturity of the business concept, including market understanding and financial planning.)

Assessment: Strong qualitative market need is identified (meeting fatigue, remote misalignment). Core value proposition is clear. However, detailed competitive analysis against major incumbents and the necessary partnership structures require validation.

Next Stage: **BRL 5** – Market entry strategy defined, tested, and validated (i.e., running pilots to confirm willingness-to-pay and ideal subscription structure for various team sizes).

Prototyping & Testing Roadmap

Outline of a phased, actionable roadmap to evolve the concept into a scalable solution:

• Phase 1: Minimum Viable Product (MVP) - **The Skiff** (0–3 Months)

Focus: Develop the core sailing loop (set destination, assign roles, conduct basic meeting/voyage) and implement simple Visual Progress Mapping.

Action: Targeted field trials with 3-5 friendly, internal teams (alpha users) to validate metaphorical clarity.

• Phase 2: Enhanced Product - **The Brigantine** (4–9 Months)

Focus: Integrate full task management (action items automatically become tracked tasks, or "cargo"). Introduce "Squall Alert" risk detection.

Action: Begin parallel business model validation by testing usage limits and measuring adoption rates for premium features (e.g., advanced analytics).

• Phase 3: Scaling & Refinement - **The Clipper** (10–15 Months)

Focus: Develop advanced executive features (multi-voyage dashboards, API integration with major HR/CRM systems).

Action: Iterative refinements based on usage feedback from initial paying early adopters, focusing on enterprise compliance and stability.

Strategic Launch & Market Integration

• Go-to-Market Strategy: **Land and Expand.** Target mid-sized remote/hybrid companies (100–500 employees). Offer a highly attractive free tier for core teams (the "One-Ship Plan") focused purely on the core meeting function to drive organic adoption and viral growth.

• Strategic Partnerships: Seek deep, native integrations with collaboration platforms like **Microsoft Teams** and **Slack** to capture meeting context seamlessly. Partner with **organizational design consultants** to position CompassDeck as a key component of a healthy remote workflow.

• Macrotrend Integration: CompassDeck capitalizes on the acceleration of **The Future of Work** (permanently remote/hybrid structures) and the rising demand for **Digital Well-being** (reducing cognitive load and meeting fatigue). By making collaboration engaging and clear, it becomes an essential tool for **sustainable alignment** in the modern enterprise.

Next Step

Immediately commission an Experience Design Sprint focused on finalizing the core visual metaphor and user flow for the "Visual Progress Mapping" feature to ensure the aspirational vision translates into intuitive software.
