Deep Innovation: UnityMatch Strategic Talent Alignment Platform Dossier

Vision & Value Proposition

UnityMatch reimagines the conference floor as a dynamic marketplace of skills and opportunities.

Deeper Engagement: Moves attendees from 'sitting through' a session to actively seeking their next internal career move or mentor.

Measurable Outcomes: Generates a 'Relationship Heatmap' of the event, proving that networking led to actual project commitments.

Sponsor Value: Provides exhibitors with 'Intelligence Leads'—attendees whose skill gaps match the sponsor's service offerings.

Insight Longevity: The data captured feeds directly into corporate HR systems, ensuring the 'event magic' translates into long-term retention.

Scalability: Optimized for both intimate 20-person executive retreats and 10,000-delegate industry summits through modular AI matching tiers.

Attendee & Stakeholder Impact

The High-Potential Attendee: Often feels invisible in large crowds. UnityMatch solves the 'random networking' pain by proactively suggesting three high-value connections based on their hidden skills. Quote: 'I didn't just meet people; I met the specific executive who needed my niche expertise for the Q4 launch.'

The Event Producer: Under pressure to justify rising venue costs. UnityMatch provides a dashboard of 'Connection Velocity' to prove the event’s worth to the board. Quote: 'For the first time, I can show exactly how many cross-departmental silos we broke down during the three-day program.'

The Chief People Officer (Non-Obvious): Looking for ROI on the L&D budget. UnityMatch identifies rising stars who aren't yet in leadership roles, helping bridge the gap between potential and performance. Quote: 'The platform flagged twelve 'hidden gems' in our engineering team who are now being fast-tracked for management.'

Feasibility Assessment

Technology Readiness Level (TRL): 4. The TRL scale (1–9) tells us how close a technology is to being reliably used in the real world — 1 is a raw idea, 9 is fully proven and deployed at scale.

Tech Status: Core matching algorithms for recruitment exist, but 'live environment' synchronization for simultaneous user loads during a 15-minute networking break requires validation.

Business Readiness Level (BRL): 3. The BRL scale (1–9) measures how ready an innovation is for real-world deployment — from early concept through to proven, scalable business model.

Operational Fit: High setup complexity currently exists. Success depends on seamless integration with existing event apps like Cvent or Whova to avoid 'app fatigue'.

Reliability: The system must fail-safe to 'blind matching' if WiFi drops, ensuring the attendee experience remains tactile even if the AI goes offline.

Prototyping & Pilot Roadmap

Phase 1 — MVP: Test a web-based 'Light' version at a 50-person leadership offsite to validate the core matchmaking logic and user interface.

Phase 2 — Controlled Pilot: Deploy at a mid-scale internal corporate conference (300-500 pax). Stress-test the 'matching rush' immediately following the keynote session.

Phase 3 — Integration: Develop API connectors for major registration platforms and build a 'Sponsor Dashboard' to visualize attendee-to-exhibitor skill matches.

Phase 4 — Scaling: Create a white-label implementation playbook for production agencies to deploy UnityMatch without direct founder intervention.

Strategic Launch & Market Integration

Partnerships: Targeted integration with AV production houses who can offer UnityMatch as a high-margin 'engagement add-on' to their existing service packages.

Rollout: Lead with a 'Founding Partner' program for one Fortune 500 company to create a high-prestige case study focused on 'Internal Mobility ROI'.

Macrotrend Alignment: Addresses the shift from 'information broadcast' to 'collective intelligence generation.' It meets the C-suite demand for events that produce strategic output.

Next Step: Select a small-scale (50-100 person) internal leadership event in the next 30 days to run a 'manual-analog' pilot of the matching algorithm using paper-based profiles to validate connection quality.
