Deep Innovation: FlowState AI Spatial Intelligence Dossier

Vision & Value Proposition

FlowState shifts the event's role from a static location to an active generator of strategic insight by mapping the 'unseen' movement of every attendee.

Deeper Engagement: Identifies 'dead zones' in real-time, allowing organizers to redirect traffic and boost participation in under-visited areas.

Measurable ROI: Provides hard data on dwell times at sponsor booths and service counters, replacing anecdotal feedback with precise metrics.

Operational Excellence: Predicts queue build-ups before they frustrate attendees, ensuring a seamless flow from registration to the final keynote.

Beyond the Event: Generates a 'digital twin' of attendee behavior that informs future floor plan designs and content scheduling.

Scalability: Adapts from executive boardroom sessions to 10,000+ attendee trade shows by leveraging existing CCTV or temporary sensor arrays.

Attendee & Stakeholder Impact

The Attendee (The Time-Poor Professional)

Context: Navigating a massive venue to find specific sessions and networking hubs without wasting time in lines.

Pain Point: Missing half a keynote because the coffee queue or registration line was poorly managed.

Quote: 'I actually saw everything I wanted to see because the app told me exactly when the queues were shortest.'

The Event Producer (The Operational Lead)

Context: Responsible for safety, flow, and the overall 'vibe' of the event floor.

Pain Point: Lack of real-time visibility into crowd density, leading to reactive rather than proactive management.

Quote: 'For the first time, I wasn't putting out fires; I was moving resources to where the crowd actually was.'

The Sponsor Activation Manager (The ROI Hunter)

Context: Needs to justify the high cost of a premium booth placement to their stakeholders.

Pain Point: Relying on badge scans which don't capture the true 'interest' of passersby or dwell times.

Quote: 'We proved that while only 50 people scanned, 500 people spent more than 3 minutes engaging with our display.'

Feasibility Assessment

A. Technology Readiness

The TRL scale (1–9) tells us how close a technology is to being reliably used in the real world — 1 is a raw idea, 9 is fully proven and deployed at scale.

Current Level: TRL 6 (System/subsystem model or prototype demonstration in a relevant environment).

Assessment: Computer vision for skeletal tracking and heatmap generation is mature in retail; however, low-latency deployment over shaky event WiFi and privacy-compliant 'anonymization at the edge' requires specific validation for live event environments.

B. Operational Feasibility

The BRL scale (1–9) measures how ready an innovation is for real-world deployment — from early concept through to proven, scalable business model.

Current Level: BRL 4 (Initial business model defined and validated through market research).

Setup: Can be deployed via 'plug-and-play' AI camera kits or by tapping into existing venue RTSP streams, making it accessible for non-technical teams.

Privacy: Must utilize 'Privacy by Design' where no PII (Personally Identifiable Information) is stored, only anonymized vector data, to meet GDPR/CCPA standards.

Cost Model: Scalable 'Per Camera' or 'Per Square Meter' daily rental fee, fitting easily into existing AV or production budgets.

Prototyping & Pilot Roadmap

Phase 1 — MVP & Internal Validation

Deploy a 3-camera setup at a 50-person networking lunch to track movement between food stations and high-top tables. Success metric: 90% accuracy in identifying peak 'bottle-neck' times.

Phase 2 — Controlled Live Pilot

Partner with a mid-sized industry conference (500 attendees). Focus exclusively on the registration area and the main sponsor hall to validate real-time dashboard responsiveness during the morning rush.

Phase 3 — Iterate & Validate the Business Model

Integrate data with the event mobile app to provide 'busy-ness' indicators to attendees. Test the 'Premium Analytics' report as a upsell for exhibitors and sponsors.

Phase 4 — Scale & Ecosystem Integration

Develop an API to push real-time flow data into Cvent or Eventbrite. Build a 'Playbook for Spatial Optimization' for repeat annual clients.

Strategic Launch & Market Integration

Strategic Partnerships

AV & Production Houses: Position FlowState as a value-add 'intelligence layer' that production companies can upsell to their existing corporate clients.

Venue Partners: Establish 'FlowState Ready' venues with pre-installed compatible hardware to lower the barrier for organizers.

Rollout Strategy

Launch with a 'White Glove' pilot for a major tech brand's flagship event to create a high-profile case study. Use a 'Show, Don't Tell' interactive heatmap demo for sales calls.

Macrotrend Alignment

Capitalizes on the shift from 'Information Broadcast' to 'Experience Engineering.' Responds to the C-suite demand for 'hard data' on human-to-human interactions in a post-pandemic world.

Next Step

Identify a single high-traffic zone at your next internal event and deploy a 'Shadow Pilot'—using temporary cameras to record movement for 4 hours—to generate a post-event 'Spatial Audit' and prove the value of the insights.
