Deep Innovation: FitFocus AI Event Networking Accelerator

Vision & Value Proposition

FitFocus shifts the event role from a passive content delivery platform to an active generator of strategic human capital.

Deeper attendee engagement: Participants shift from 'browsing' the room to targeted, high-value interactions based on a 93% fit probability.

Measurable outcomes: Provide post-event reports showing exactly how many 'high-fit' connections were facilitated, justifying attendee ticket prices and corporate travel budgets.

Sponsor ROI: Sponsors gain visibility as facilitators of strategic connections, moving beyond static logo placement to become essential parts of the attendee's success.

Persistent Insights: Data generated provides a map of industry trends and interests that lives beyond the event, informing future programming and marketing strategies.

Operational Credibility: The system scales across formats, providing value in both small high-stakes boardrooms and 5,000-person conference floors.

Attendee & Stakeholder Impact

The Attendee (The Strategic Networker): They are under pressure to return from events with tangible leads or partnerships. FitFocus solves the 'room anxiety' of finding the right person among thousands. Quote: 'I didn't waste time on small talk; the AI put me in front of the exact person I needed to meet to close our next round.'

The Event Producer (The NPS Guardian): Accountable for engagement scores and repeat bookings. This tool provides a unique 'hook' that differentiates their event from commodity webinars. Quote: 'Our engagement metrics tripled because attendees felt the event was curated specifically for their career needs.'

The Chief People Officer (The Strategic Talent Lead): Often signs off on large-scale internal conference budgets. They need to see that 'culture' and 'connection' are actually happening. Quote: 'For the first time, I have a data map showing how our silos are actually breaking down during the annual summit.'

Feasibility Assessment

Technology Readiness: TRL 6. The TRL scale (1–9) tells us how close a technology is to being reliably used in the real world — 1 is a raw idea, 9 is fully proven and deployed at scale.

Assessment: The logic for profile mapping and matchmaking exists, but real-time visualization in a high-density, low-bandwidth environment like a conference center needs specific stress testing.

Operational Feasibility: BRL 4. The BRL scale (1–9) measures how ready an innovation is for real-world deployment — from early concept through to proven, scalable business model.

Setup Complexity: Can be deployed via existing event apps or simple QR-code based web interfaces, requiring minimal technical staff on-site.

Reliability: Failure mode for AI matchmaking is a reversion to a standard attendee list, meaning there is no 'catastrophic' event failure if the AI goes offline.

Privacy: Requires clear opt-in and 'privacy by design' architecture to comply with GDPR/CCPA during the registration process.

Prototyping & Pilot Roadmap

Phase 1 — MVP: Create a web-based portal to test the 'Fit Score' algorithm on a 50-person VIP guest list at a leadership offsite.

Phase 2 — Controlled Pilot: Deploy at a 200-person industry association event. Stress-test data ingestion speeds during the 'registration rush'.

Phase 3 — Business Model Validation: Test tiered pricing: 'Basic' networking for all, and a 'Premium' strategic matchmaking layer sponsored by a lead partner.

Phase 4 — Ecosystem Integration: Build native integrations with Cvent and Eventbrite to automate profile syncing and eliminate manual data entry for organisers.

Strategic Launch & Market Integration

Strategic Partnerships: Partner with AV companies who can display the 'Connection Map' on large-scale venue LED screens to create a visual spectacle of attendee engagement.

Market Alignment: This aligns with the shift from 'Information Broadcast' to 'Collective Intelligence', where the value of an event is the data-rich network it creates.

Show Don't Tell: Lead with a single, high-impact case study from a Tier-1 tech conference showing a 40% increase in post-event partnership formation.

Next Step: Identify a high-value 50-person event in the next 30 days to run a 'Manual AI' pilot—using the algorithm to curate 1-on-1 introductions and measure the 'Fit Accuracy' through direct feedback.
